

Drvena baštenska kućica

2006

Osvrt na projekat

Dizajn & Projektovanje | Design & Planning

Izvedeni projekat drvene baštenske kućice.

Drvena baštenska kućica ukupne površine 3 kvm sa verandom i terasom, napravljena je za potrebe odlaganja baštenskog alata, stolica i drugih neophodnih stvari koje svaki baštovan poseduje. Konstrukcija zidova je napravljena od drvenih greda (i tanjih fosni) koje su obložene sa lamperijom. Krov ima takodje drvenu podkonstrukciju i iznutra je obložen pvc folijom, dok sam krovni pokrivač čini voodoptorni zeleni poliester. Kućica je inspirisana skandinavskim dizajnom sličnih objekata koje možemo videti po Norveškoj, Danskoj ili Islandu. Odlično se pokazala na sve uticaje atmosferilija.

“

Kreativno i pametno odlaganje u vrtu.

”

Wooden garden house built in 2006.

The wooden garden house with a total area of 3 sqm with a veranda and terrace, was made for the needs of storing garden tools, chairs and other necessary things that every gardener has. The construction of the walls is made of wooden beams (and thinner beams) which are lined with paneling. The roof also has a wooden substructure and is covered with pvc foil on the inside, while the roof covering itself is made of waterproof green polyester. The house is inspired by the Scandinavian design of similar buildings that we can see in Norway, Denmark or Iceland. It proved to be excellent in all atmospheric influences.
